Paleobotany (from the Greek *paleon* = old and *botane* = plants) is the study of plant remains from different geo-logical periods and how they fit in evolutionary history. Scien-tists use the information to learn about ancient ecosystems and how these affected the animal life and climate in differ-ent periods. Coal and petrified wood are two examples of plant fossils.

The Monterey Bay Aquarium was established in 1977 by a group of marine scientists, local residents of Monterey, California and members of the David and Lucille Packard Foundation. It is devoted to the unique marine life of the Monterey Bay and fosters "... a greater awareness of the wealth of life our oceans hold. For only through this awareness will the oceans rise to the forefront of world conservation efforts..." - Julie Packard
