PREHISTORIC LANDSCAPES

Sizes Range: 4" to 6.75" (10 to 17 cm)

Paleobotany (from the Greek paleon = old and botane = plants) is the study of plant remains from different geological periods and how they fit in evolutionary history. Scientists use the information to learn about ancient ecosystems and how these plants affected the animal life and climate in different periods. Coal and petrified wood are two examples of plant fossils.

MONTEREY BAY AQUARIUM®

MONTEREY BAY
AQUARIUM®

The Monterey Bay Aquarium® was established in 1977 by a group of marine scientists, local residents of Monterey, California and members of the David and Lucille Packard Foundation. It is devoted to the unique marine life of the Monterey Bay and fosters "... a greater awareness of the wealth of life our oceans hold. For only through this awareness will the oceans rise to the forefront of world conservation efforts..."

- Julie Packard
